

VESICULA

This is a grayscale B-mode ultrasound image showing a cross-section of a biological structure. The image is fan-shaped, typical of a sector scan. A dark, anechoic region is visible on the left side, labeled 'VESICULA'. The rest of the image shows various echogenic textures, including a curved, layered structure at the top and a more complex, granular area on the right. The entire image is set against a black background and framed by a white border.
